

Kentkart Solution Packages

RobuGo

RobuGo is Kentkart's standard solution package, designed for cities, municipalities, and transit operators seeking a comprehensive all-in-one platform. It combines robust hardware with cloud-based software to deliver flagship fare collection, advanced fleet management, passenger counting, and video surveillance capabilities.

RobuGo supports diverse transit models, including multi-modal networks and fare concession programs, while offering the flexibility and scalability needed to adapt to evolving urban mobility strategies.

MobyGo

MobyGo is Kentkart's easy-to-deploy, cost-effective smart mobility package that delivers a complete fare collection system with a minimal set of components. The system consists of a Driver Control Panel, a Validator, and a ticketing application, with one camera or on-board passenger information display available as an option.

GateGo

GateGo is tailored for gated environments such as metro or tramway stations and Bus Rapid Transit entry points. It provides fast, secure, ticket validation through turnstile-mounted hardware.

Unified by Powerful ABT Core

While each package differs in its hardware components, all are powered by Kentkart's Account-Based Ticketing (ABT) platform, and support open-loop EMV and QR-based payments, delivering fast, secure, and user-friendly fare processing. This unified back-office foundation simplifies fare management, ensures operational consistency, and enables seamless future upgrades without infrastructure overhauls.

Feature Comparison

Feature	MobyGo	RobuGo	GateGo
